Conference Abstract

RECONCILING HEART AND BRAIN – THE QUAR'ANIC PERSPECTIVE

MOHAMMED ASLAM DAUD

Dr. Aslam Daud is a physician turned into a humanitarian relief champion. With more than 30 years of experience in this field, he has led a number of humanitarian relief teams to respond to natural disasters and assist victims. He has also led and organized many medical missions in third world countries. He is currently serving as National Vice President of Ahmadiyya Muslim Community in Canada and served as Chairman of Humanity First Canada. Professionally, Dr. Daud is working as a Health Solutions Consultant for government and private healthcare information technology companies. He has the honour of being the Rapporteur for NGO Consultations with UNHCR, the United Nations High Commissioner for Refugees. Dr. Daud has presented at the UNHCR EXCOM 2019 at the United Nations Headquarters in Geneva.

The phenomenal speaker present this research in 1st International The Holy Quran & Science Conference and Exhibition-2019, held in Mississauga ON Canada. The Conference Abstract is published on behalf of the decision of acceptance and approval of Conference Organizing Committee.

Key words: Reconciling, Heart, Perspective

Abstract

The heart has been mentioned in the Holy Qur'an more than a hundred times. Similarly, the mind has been mentioned dozens of times. On the surface, it appears that both words have been used interchangeably in most places in the Holy Qur'an. However, when one starts to ponder on these two words and how they have been used, the differing perfection of usage becomes clearly noticeable. The fact that the Holy Qur'an contains in-depth knowledge of the heart and brain and mentions them to describe and explain facts, situations and human psychology, that modern sciences are just beginning to explore. While some find it puzzling that the Holy Qur'an calls it the 'heart' which is really the function of the 'brain', it is intriguing to see that new researches have started to unveil the undiscovered relationship of the

two organs and moreover redefining their roles in the context of 'mind'. It was impossible for any human being to know and explain this very complicated topic in the simplest possible way that made sense at that time and remains accurate after 15 hundred years of continuous research.

The moral and ethical thought processes as wonderfully described in the Holy Qur'an is one of the greatest proofs that it is a word of God. My presentation will be an effort to highlight the perfection of the use of the "heart" and "mind" reconciled with scientific evidence of functions of the human heart and brain organs.
